HAARIS TOOR

+1 732-810-3220 | haaristoor1@gmail.com | linkedin.com/in/haaristoor | github.com/htoor01

Education

Rutgers University, New Brunswick — Expected Jan 2028
B.S. in Computer Science, Minor in Economics

- **Activities:** Muslim Tech Collaborative (MTC), Blueprint Fellowship, Rutgers COGS; MTC Code for Impact, HackRU Fall, Verizon Smart Campus Competition

Technical Skills

Languages & Frameworks: Python, Java, TypeScript, SQL, Flask, Spring Boot, Node.js, pytest, JUnit
Tools & Platforms: AWS (Lambda, S3, IAM, CDK), Docker, GitHub Actions, Linux, Git, SQLite

Work Experience

Open Source Developer — Oct 2026 – Present
Public Invention (Librecorder diagnostic platform) — *Remote*

- Implementing pytest contract tests in GitHub Actions that validate ML classifiers against a shared JSON schema.
- Refactoring Flask modules, removing stale files, and rewriting docs to simplify onboarding for outside contributors.

Founding Engineer — Nov 2025 – Jun 2026
Lotari (Early-stage B2B legal-tech SaaS startup) — *Remote*

- Built IntakeAI as sole engineer in TypeScript on AWS: an LLM-based intake service that ingests email, Slack, and form requests, flags missing information, classifies work, and assigns risk scores for routing across **150+** test matters.
- Debugged and fixed ElectAI's PDF field-extraction step (AWS Lambda, Textract), reaching **90% field accuracy** on scanned and fillable test forms.
- Set up GitHub Actions deployments to AWS using **OIDC** instead of stored access keys, giving CI short-lived credentials for S3, Lambda, and CDK deploys.

AI Fellow (Contract) — Dec 2025 – May 2026
Handshake AI — *Remote*

- Evaluated multimodal AI outputs against provided rubrics, creating reference responses to support model training.

Projects

AutoTA (Automated Grader) | *Java, Spring Boot, Docker, GitHub Actions* — GitHub

- Built a grader that ran JUnit tests against 200+ student submissions, reducing grading time from **3–6 hours to 20–30 minutes**; subsequently rebuilt it with Spring Boot, Dockerized test runs, and GitHub Actions CI.

RU Afloat (Evacuation App, HackRU) | *TypeScript, MapLibre GL, Node.js* — Devpost

- Co-developed a flood evacuation map using TypeScript and MapLibre GL, implementing Dijkstra's algorithm to calculate walking routes to safe locations within a 20-minute radius.

Leadership and Involvement

Backend Engineer Fellow (1 of 28 fellows) — Sep 2026 – Present
Blueprint Rutgers — *New Brunswick, NJ*

- Building backend functionality for Python/SQLite apps in a 5-person team through Git-based collaboration.

Summer Java Tutor — May 2026 – Aug 2026
Quakerbridge Learning Center — *Mercerville, NJ*

- Taught core Java, Object-Oriented Programming (OOP), and Data Structures & Algorithms (DSA) to 45+ students through assignments, labs, and assessments, contributing to a 90%+ pass rate on the district exam.
